MUvi

Made for the city

Essential. Dynamic. Handy. Meet your new electric scooter

Extremely easy to drive and super comfortable.
The e-scooter MUVI comes with everything to
move around the city in a fun, safe
and efficient way.

Designed for people who value time
and practicality above everything else.

ECOLOGICAL BY NATURE

Created with the latest electrical mobility technology available and designed to provide you with clean, nimble, efficient and uncomplicated mobility. Economical, logical and practical, the MUVI has a huge advantage over any other: the word “waste” does not exist in its vocabulary.

EXUDES TECHNOLOGY

Under its careful “friendly scooter” appearance, there is state-of-the-art technology designed to propel you around the city efficiently, thanks to its electronic controller developed by Torrot, which connects with the latest smartphones for total control.

INTERCHANGEABLE BATTERIES

MUVI has 2 removable batteries which you can easily recharge wherever and however you want: in the garage, at the office, at public charging points...

MUVI CITY - L1, offers the option to be driven with only 1 battery.

THE BEST STABILITY AND MANEUVERABILITY

When designing the MUVI, we thought first and foremost about its final weight, so we developed a robust yet lightweight chassis which has been given an innovative rear shock absorber system. Along with its front hydraulic fork, it will provide you with impressive agility and easy handling and stability, largely thanks to its small size and height.

SMART DASHBOARD

Display LCD 4", with 3 configurations available.
 CANBUS communications + Bluetooth.
 Remote diagnosis by APP + Diagnosis OBD-1 (Normative).
 Management modes of consumption.

App Experience CONNECTIVITY AND CONTROL

Control and configure your MUVI with your Android or iOS smartphone and turn it into a social and interactive vehicle.
